

IN THE SPECIFICATION

On page 21, please replace the paragraph under the heading “ABSTRACT” with the following:

A system for determining whether any groups have an improper level of privilege includes first program instructions comparing members of the groups to a list of trusted individuals, second program instructions determining if any groups with a privilege level higher than user level privilege include members not on the list of trusted individuals, and third program instructions determining if any group with a privilege level higher than user level privilege has a group name specified for a group with user level privilege. Fourth program instructions determine whether groups with a privilege level higher than user level privilege have a group name not generally used for a group with the higher level privilege. Consequently, members of groups with higher privileges having names used for groups with user level privilege or names not used for groups with the higher privilege are revealed as trusted or not trusted.
